SUMMARY

AI/ML Engineer specializing in **NLP, Generative AI, and Computer Vision**, with expertise in training and deploying deep learning models (RNNs, Transformers, CNNs) for **text generation, retrieval, and object detection**. Skilled in building **RAG pipelines, embeddings-based search**, and **agentic AI systems**. Proficient in **Python, PyTorch, TensorFlow, and Scikit-learn**, focused on delivering **scalable, production-grade AI solutions**

PROFESSIONAL EXPERIENCE

AI Developer

XABTA Pvt Ltd (Remote)

May '25 — Present

- Developing **RAG-based chatbots** leveraging LLMs for intelligent and context-aware interactions.
- Designing and maintaining **Generative AI pipelines**, integrating **Vision-Language Models (VLMs)** for multimodal capabilities.
- Improving **model performance** through fine-tuning, prompt optimization, and performance evaluation.
- Dockerizing AI applications** to ensure seamless deployment and scalability across environments.
- Building **FastAPI backends** for efficient, low-latency model serving and integration with frontend systems.
- Implementing **token tracking and cost monitoring systems** for Generative AI workflows.

Machine Learning Fellow

Bytewise Limited (Remote)

May '24 — Aug '24

- Developed high-accuracy predictive models for classification and regression tasks
- Implemented deep learning architectures for complex pattern recognition
- Conducted comprehensive data analysis and visualization for business insights

EDUCATION

BS in Computer Science, Arid Agriculture University

Jul '25

PROJECTS

ECG Classification Using DenseNet121

- Developed binary and multi-class classification models for ECG signals using PyTorch with CUDA acceleration
- Achieved 96.2% accuracy in arrhythmia detection by adapting DenseNet121 architecture
- Implemented custom data loader for variable-sized ECG images with dynamic resizing

Customer Support Chatbot for Laziza Crispo

- Developed FastAPI backend with Groq's LLaMA-70B and Nomic AI embeddings
- Achieved 88% query resolution rate through optimized prompt engineering
- Reduced support tickets by 35% with automated FAQ responses

AI-Powered Document Processing System

- Built OCR solution achieving 98% text extraction accuracy
- Processed 1000+ daily documents with advanced image preprocessing

Intelligent Academic RAG Chatbot

- Implemented FAISS vector search with 95% answer accuracy
- Reduced response latency by 40% through query optimization

Soybean Pod Detection and Counting Using Deep Learning (YOLOv8)

- Designed and implemented a **YOLOv8-based object detection model** for **automated soybean pod detection and counting** using computer vision techniques.
- Utilized **Python, PyTorch, and OpenCV**, and trained the model on **NVIDIA RTX 4000 Quadro GPU** to achieve high accuracy and efficient inference.
- Applied **deep learning, image processing, and model optimization** to enhance **precision agriculture** and automate crop yield estimation

SKILLS

Artificial Intelligence LLMs, RAG, NLP, Computer Vision, Predictive Modeling

Development Frameworks TensorFlow, PyTorch, LangChain, Langgraph, FastAPI, Flask

Tools and Technologies Docker, CICD, Git, FAISS, Nomic AI, Groq API, Streamlit

Programming Languages Python, JavaScript, SQL
